

DCP 253 Draft Legal Text

Retightening and Remaking of Whole Current Metering System Terminal Connections

Add new Clauses 25.23 and 25.24 as follows:

25.23 This Clause 25.23 applies to Metering Points for which the flow of electricity is metered for settlements by putting the full electrical current through the meter (known as ‘whole-current metering’). Where the Company wishes to maintain, modify or replace the Electric Lines and/or Electric Plant which provides the connection to the Metering Point, the User hereby consents to the Company adjusting the terminals of the meter (and, where appropriate, re-making the connections to them to remedy any disturbance of the connections that may have occurred unintentionally).

25.24 Where the Company’s work as referred to in Clause 25.23 can only reasonably be undertaken by the temporary removal of the meter, the User hereby consents to the Company temporarily removing the meter and then (as soon as reasonably practicable thereafter) re-installing the meter as close as reasonably practicable to its original position.

Add a new Clause 30.18 as follows:

Exchange of Information in respect of Incidents

30.18 Where an incident arises in the course of the User (or its BSC Party Agent) or the Company undertaking work on (or in the immediate vicinity of) a Metering Point, and to the extent that it is reasonably necessary for the User and the Company to exchange information in order to resolve the incident, then the User and the Company shall exchange such information.
