Paper Reference	Panel_2017_1018_03_Charging Methodology Models for 01 April 2019
Meeting Date	18 October 2017
Action	For Decision

Charging Methodology Models for 01 April 2019

1. Synopsis

- 1.1 The paper details the Charging Methodology CP that may affect April 2019 tariffs and the current status of the CP.
- 1.2 The Panel is invited to review and confirm that the impact on each of the Charging Methodology models has been correctly identified. Any approval will be used as the basis for requesting updated Charging Methodology models for use by DNOs in calculating April 2019 tariffs.

2. Charging Methodology CP

- 2.1 There is currently only one Charging Methodology CP that, subject to approval, will be implemented in April 2019. The table below details the CP and identifies whether the CP has any Charging Methodology Model impacts.

DCP	Implementation Date	Status	CDCM Model Impact	EDCM Model Impact	ARP Impact	PCDM Impact
DCP 268 - DUoS Charging Using HH settlement data	01 April 2019	Awaiting Authority decision	Yes	Yes	Yes	No

- 2.2 The expected decision date for DCP 268 has passed, however, it is anticipated that Ofgem will provide their decision prior to the November Panel meeting. In the event that the Authority decision on DCP 268 is further delayed, the DCUSA Panel is invited to consider whether it would be necessary to request the CDCM, EDCM models and an ARP baselined against the 2018/19 tariffs which contain the DCP 268 solution or if the modelling that was provided at the request of the Working Group is sufficient.

3. Recommendation

- 3.1 The Panel is invited to:
 - **REVIEW** the CP listed in the table and confirm that the impact on each of the Charging Methodology models has been correctly identified; and
 - **INSTRUCT** the Secretariat on the Panels preferred next steps regarding production of the 01 April 2019 CDCM, EDCM and ARP models.
