

DCP 274 Draft Legal Text

~~Amend Schedule 17 Clause 12.3~~

~~12.3 A fixed export capacity charge in p/kVA/day is calculated as follows:~~

~~—— Fixed export capacity charge in p/kVA/day = $(100 / DC) * [EDCM\ DG\ revenue\ target] / [Total\ EDCM\ generation\ capacity]$~~

~~—— Where:~~

~~—— EDCM DG revenue target in £/year is calculated as described above~~

~~—— Total EDCM generation capacity (in kVA) is the aggregate Chargeable Export Capacity of all Connectees, adjusted, if necessary for Connectees connected part of the year.~~

~~—— The fixed export capacity charge in p/kVA/day is applied to the Chargeable Export Capacity of each EDCM Connectee.~~

Amend Schedule 18 Clause 12.6

12.6 The fixed export capacity charge in p/kVA/day is applied to the Chargeable Export Capacity **less the Maximum Import Capacity** of each EDCM Connectee. **If this calculation would result in a value less than zero then the Chargeable Export Capacity less the Maximum Import Capacity is deemed to be zero.**
