

## DCP 259 Draft Legal Text

### National Grid Electricity Transmission (NGET) Charges, Securities and Liabilities

- 5.43 We have an obligation under the CUSC to discuss certain requests for connection or changes in connection with NGET. Such requests are typically for large electrical demand or generation projects. Under certain circumstances, as determined by NGET, they may apply charges to assess the potential impact on the transmission system of a request or the combined effect of a number of requests and these will be included in the Connection Charge, or through a separate mechanism agreed between you and us.
- 5.44 Subsequent to such assessment NGET may also require works to be undertaken on the GB Transmission System as a condition of the connection being permitted.
- 5.44A Where NGET applies charges for these works, we will reflect [the] such costs [attributed to your connection] in our charges to you.
- 5.44B In the event of NGET applying securities for these works, we will reflect the value of those securities [attributed to your connection] in our Connection Offer to you. Your total liability may be greater than the value of securities. In such circumstances we will advise you of your total liability.
- 5.44C In the event that you terminate or reduce the capacity of your connection with us, NGET will apply a National Grid's cancellation charge for which you shall be liable.
- 5.44D Where the amount of security requirement is less than your total liability we will not require security from you in relation to the difference~~carry out credit checks in relation to the difference.~~

**Comment [CH1]:** Add connection term as a defined term. Add a definition for Cancellation Charge and review National Grids definition or add National Grid in front of cancellation charge.
