

## **Recovered Equipment and Deferment of Asset Replacement**

### **1. The current wording**

- 1.33 You will not receive any credit for the value of any equipment recovered by us as a result of the connection.

### **2. The wording proposed in the original DCP190**

- 1.33 Normally you will not receive any credit for the value of any equipment recovered by us as a result of the connection. Where a Temporary Connection is to be Disconnected we may make a payment based on the value of any equipment recovered that we can subsequently reuse, net of any removal and refurbishment costs.

### **3. The wording proposed in the alternative DCP190A**

- 1.33 Normally you will not receive any credit for the value of any equipment recovered by us as a result of the connection. Where a Temporary Connection is to be Disconnected we will make a payment based on the value of any equipment recovered that we can subsequently reuse, net of any removal and refurbishment costs.

### **4. Brian Hoy's alternative wording**

- 1.33 Normally you will not receive any credit for the value of any equipment recovered by us as a result of the connection. Where a Temporary Connection is to be Disconnected we will consider whether any refund is due and, where appropriate, will may make a payment based on the value of any equipment recovered that we can subsequently reuse, net of depreciation, removal and refurbishment costs.

### **5. Wragges suggested wording**

- 1.33 Normally, you will not receive any credit for the value of any equipment recovered by us as a result of the connection. However, where a Temporary Connection is to be Disconnected, we will consider whether to issue you with a discretionary partial refund and, where we consider it appropriate to do so, we will make a payment based on the value of recovered equipment that we can subsequently reuse (net of depreciation and removal and refurbishment costs).

### **6. Wragges suggested wording**

- 1.33 Normally, you will not receive any credit for the value of any equipment recovered by us as a result of the connection. However, where a Temporary Connection is to be Disconnected, we will determine the value of recovered equipment that we can subsequently reuse (net of depreciation and removal and refurbishment costs). Where there is a net value in the recovered equipment that can be reused, we will pay you the amount of such net value.

### **7. Wragges suggested wording**

- 1.33 Normally, you will not receive any credit for the value of any equipment recovered by us as a result of the connection. However, where a Temporary Connection is to be Disconnected, we will determine the value of recovered equipment that we can subsequently reuse (net of depreciation, removal and refurbishment costs and reasonable de-minimus value). Where there is a net value in the recovered equipment that can be reused, we will pay you the amount of such net value.
