DCP 104 Legal Drafting

Definitions

Manifest error   A data input error made in terms of inputs or
                                                      calculations within the model. An error is a
                                                      manifest error if it is not a subjective
                                                      forecasting error

Clause 19

X.X   Any recovery adjustments caused by a DNO incorrectly setting their prices due to
        manifest errors should be compensated over a **3 year period, with the phasing to
        be defined by the Authority for differences outside of the agreed thresholds.**

Manifest Data Errors

If a manifest data input error results in an estimated revenue over or under recovery of no more
than + [X%] or no less than [Y%] of the Network Operator's allowed revenue for that year, the
over or under revenue recovery is spread equally over the next 3 years, following the timescales
as detailed in Clause 19.1.

If a manifest data error results in an estimated over recovery of greater than [X%] or under
recovery of less than – [Y%] of the Network Operator's allowed revenue for that year, the matter
is referred to the Authority for determination on the phasing of the correction over the 3 year
period.

If the manifest date error does not result in an impact on the Network Operator's allowed
revenue for that year but impacts the revenue recovered from each customer group, the matter is
referred to the Authority for determination over the phasing of the correction over the 3 year
period.

Any manifest errors which are identified between the publication of the indicative and the final
tariffs must follow the above process.
