In such instances the Working Group should notify the DCUSA Panel. The DCUSA Panel may redirect the Working Group if any development and refinement the revised intent is not reasonable and appropriate.
  - Providing both the Proposer and a majority of the Working Group are supportive, the developing and refining of a proposal may include proposing to the DCUSA Panel that the status of the CP as either “standard” or “urgent” is changed. ### 3 DCUSA Charging Methodology Changes

---

3.1 Where a CP impacts the DCUSA Charging Methodologies, the Working Group is additionally required to ensure that the following actions are carried out prior to submitting the CP Change Report.

1. Where the CP impacts upon the CDCM model, EDCM models, PCDM and/or the Annual Review Pack, updated and fully tested models must be provided with the Change Report.
2. The version number of amended models must be updated in the CP legal text. The location of the version numbers is as follows:

  - EDCM FCP Model - Schedule 17 paragraph 1.3
  - EDCM LRIC Model - Schedule 18 paragraph 1.3
  - ARP – Schedule 20 paragraph 1.1
  - PCDM – Schedule 29 paragraph 1A

When updating the legal text for this, the version number and model publication date should be replaced by square brackets. A footnote should state that the date and model publication are “To be included by the Panel on implementation.”

3. Once the modelling support consultant has provided updated models, if any changes are made to the legal text that have the potential to impact upon calculations, then the modelling support consultant should be asked to confirm that the model still meets the intent of the legal text.
4. The legal text should be cross checked against all approved but not implemented CPs to ensure that no two CPs are changing the same DCUSA paragraph.
5. The proposed legal text changes are track changed against the most recently published charging methodology pre-release.
6. Considering whether, if the proposed variation were made, the Agreement would better facilitate the achievement of one or more of the DCUSA Charging Methodology Objectives than if that variation were not made, and providing a rationale for this assessment.
7. On finalisation of the modelling documentation, the Working Group is to ensure that the tariffs in the model and in Schedule 15 are reflected accurately.

### 15 Scope

- 15.1 In addition to the terms outlined in Part A above, the Working Group is required to consider and report on the following specific issues:

- The Panel noted that there are some cross-code impacts regarding this change, in particular, with Smart Energy Code (SEC) Modification ([SECMPO046 - Allow DNOs to control Electric Vehicle chargers connected to Smart Meter infrastructure](#)). The Working Group should establish all cross-code impacts and ensure appropriate collaboration with relevant industry codes.
- The Panel recognise that this change is required as part of a wider programme of other Code changes and Government policy decisions. It is therefore vital to understand all of the wider industry impacts and establish clear communications to ensure all necessary Code changes and Government policy decisions are addressed in parallel.
- The Working Group should ensure appropriate engagement with Ofgem and BEIS.
- The Working Group should provide appropriate justification for the need for this change and any change in policy needed in relation to the proposed solution.
- The Panel notes that the proposed solution is designed to be used as a last resort matter. Consideration is needed as to what criteria needs to be met to justify the use of this last resort measure.
- The Panel notes that this change will require communications with customers. Consideration should be given as to whether a change to the National Terms of Connections would be needed or not.
- The Working Group should consider the impacts this solution may have on flexibility markets and indicate any impacts in the Change Report
- The Working Group needs to investigate the consequences of this change on Suppliers because the demand side response used in these emergency scenarios, will be controlled by the Distributor through the smart meter infrastructure which is currently not the case. Areas that should be investigated should include:
  - How do the Suppliers' products/tariffs work when a customer enters into the arrangement with DNOs for this activity to happen?

- What is the impact to tariffs?
- Do Suppliers need to change their Terms and Conditions?
