

Meeting Session	DCMDG 75
Paper Reference	DCMDG_2024_0516_03_Member Questions
Action	For Discussion

Member Questions

A member of the DCMDG has raised a couple of questions which we feel may be able to be answered in the context of the DCMDG meeting and these questions are set out below:

1. Should 2 MPANs that are on the same site, but not aggregated receive a single standing charge? Section 2.20 in the 2024 charging statement (below) suggests that 2 MPANs on the same site would receive 1 fixed charge, but we have a customer with 2 MPANs on 1 site, and they are receiving 2 fixed DUoS charges. Should they be receiving 1 charge, or should the wording specify that they would need to be aggregated in order to receive 1 charge?

2.20. Fixed charges are generally levied on a pence per MPAN/MSID per day basis. Where two or more HH MPANs/MSIDs are located at the same point of connection (as identified in the Connection Agreement), with the same LLFC, and registered to the same Supplier, only one daily fixed charge will be applied.

2. Are de-energised sites excluded from MPAN counts that are provided by DNOs to National Grid ESO? I believe the information sent was set out in the BSC mod P402, but my understanding is that energisation status isn't included in this data. So has there been an agreement from all DNOs that de-energised MPANs won't be included in the MPAN counts that are sent?
