Issue Title:	<i>Site count provision for TNUoS tariff setting ahead of new price controls</i>
Issue Number*:	
Attachments:	
Date Submitted	24/9/26

*Assigned by DCUSA Secretariat

Originator details	
Originator Name	<i>Daniel Hickman</i>
Company Name	NESO
Industry Role	
Email Address	Daniel.Hickman@neso.energy
Telephone Number	

Nature of Issue

NESO receives monthly counts of sites in each residual charging band on a monthly basis for billing and setting of TNUoS tariffs.

At the start of each price control period all sites are allocated to new residual charging bands, NESO as banding agent receives the anonymised MIC and consumption data for the purpose of setting the band thresholds.

This data will be out of date by the time NESO sets TNUoS Tariffs for the first year of the price control and is also not consistent with the data that will be used by DNOs to allocate a site to a residual charging band.

This can lead to inaccurate site count forecasts and therefore impact TO revenue collection.

Solution Overview – If Known

Solution Description	<i>To ensure tariffs for the new price control are set using the most accurate data to facilitate accurate revenue collection, each DNO could provide actual counts of sites in each of the new residual charging band once the re-banding has been undertaken and prior to TNUoS tariffs being set for the first year of the new ET price control</i>
Lead Time For Implementation
